ChurnSignal Architecture

How Coral connects everything

DATA SOURCES

Intercom API

Conversations, contacts, and companies — open tickets and customer context.

Support signals

Stripe API

Customers, subscriptions, invoices, and charges — billing health at a glance.

Revenue signals

FEDERATION LAYER

Coral SQL Engine

Cross-source JOINS run locally — no ETL, no data warehouse. One SQL dialect across Intercom and Stripe.

```
SELECT ... FROM intercom.conversations conv
LEFT JOIN intercom.contacts ic ON ic.id = conv.source_author_id
LEFT JOIN stripe.customers sc ON sc.email = ic.email
LEFT JOIN stripe.subscriptions sub ON sub.customer = sc.id
```
